

Smart Mirror ++

By Boring Torvalds (Team 2)

<https://github.com/BoringTorvalds>

Sprint review

What we wanted to complete:

- Setup developing environments for mirror's frontend
- Setup Echo dot
- Build weather app and news feed
- Set up authentication using facial recognition
- Test deployment on mirror
- Test visibility on mirror

Mirror's frontend

- Electron
- React.js
- Webpack

Weather and news feed

- API: <https://darksky.net>
- Hacker news: <https://hacker-news.firebaseio.com/v0>
- Weather icons:
<https://codepen.io/ESeuss/pen/NAoQVR>

Mirror UI

15.88°

What next ?

- Complete authentication with facial recognition
- Improve UIs
- Integrate more apps
- Writing tests
- API wrappers and setup for more machine learning features
